## EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                          |                                        |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|
| <b>Meta-Fiser   AI/ML Intern</b>                                                                                                                                                                                                                                                                                                                                                         | <b>New Delhi   Jun 2024 - Aug 2024</b> |
| <ul style="list-style-type: none"><li>Built stock price prediction models using Linear Regression &amp; LSTM on time-series data</li><li>Handled data preprocessing, EDA, and feature engineering using Python</li><li>Developed an automated evaluation pipeline, speeding up model iteration and deployment</li><li>Contributed to model tuning and visualization dashboards</li></ul> |                                        |

## EDUCATION

|                                                                                                                                    |                              |
|------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Don Bosco Institute of Information Technology</b>                                                                               | <b>Sept. 2025 – Present</b>  |
| Master of Computer Applications (MCA), Computer Science                                                                            | <b>Delhi, DEL</b>            |
| <ul style="list-style-type: none"><li>Currently pursuing MCA with a focus on advanced computing and software development</li></ul> |                              |
| <b>Institute of Information Technology and Management</b>                                                                          | <b>Oct. 2022 - June.2025</b> |
| Bachelor of Computer Applications (BCA), Computer Science                                                                          | <b>Delhi, DEL</b>            |
| <ul style="list-style-type: none"><li>Graduated with a CGPA of 7.0 on a 10-point scale</li></ul>                                   |                              |

## SKILLS

**Technical Skills:** Python, SQL, MongoDB, Excel, Power BI, Tableau, React.js, REST APIs  
**Data & Analytics:** Data Analysis, Business Analytics, EDA, Data Visualization, Revenue Forecasting, Market Analysis  
**Core Competencies:** Analytical Thinking, Problem Solving, Data Storytelling, Stakeholder Management  
**Soft Skills:** Communication, Attention to Detail, Adaptability, Teamwork, Time Management

## PROJECT

- Chit-Chat [\[LINK\]](#):**
- Developed a real-time chat application using the MERN stack with instant messaging support.
  - Implemented user authentication and secure access using JWT.
  - Built a responsive React UI for smooth cross-device communication.
  - Enabled real-time messaging using Socket.io for low-latency updates.
- Task Management System [\[LINK\]](#):**
- Built a modular task management system using Python and Streamlit with SQLite for persistent CRUD operations.
  - Implemented a Pandas-based analytics dashboard to track task status and completion.
  - Designed a clean, scalable architecture for easy feature expansion.
- StockLen-AI [\[LINK\]](#):**
- Built StockLen-AI, a stock price dashboard using Python and Streamlit.
  - Applied LSTM models for stock price prediction on historical data.
  - Conducted data analysis and preprocessing using Excel and Python.
  - Visualized trends and forecasts to support data-driven insights.
